		ISSUE	01
		REVISION	A
		DATE	3/14/16

## 1.0 SCOPE

This document contains specific electrical, mechanical, and environmental requirements and specifications for double-sealed, axial-leaded hybrid capacitors rated for operation at 200°C and in environments of extreme shock and vibration.

## 2.0 CONSTRUCTION

### 2.1 General

The capacitors shall be comprised of sintered tantalum anodes and ruthenium oxide coated cathodes operating in aqueous electrolyte. The components shall be confined within a tantalum case, first by a compressed gasket, followed by a hermetically welded glass to metal seal.

### 2.2 Package

The configuration and dimensions shall be as per Figure I.

#### 2.2.1 Insulation

For Kapton tape insulation, add the suffix “S” to the P/N when ordering (e.g., HC2DxxxxxxHTXS).

### 2.3 Mass

Family >>>	HCD	HC2D	HC3D
Max mass	18g	15g	15.5g

### 2.4 Hermetic Seal

The capacitor shall be hermetically sealed such that the package does not leak electrolyte or vent any gas when exposed to a vacuum, per MIL-STD-202, Method 112, Condition C, Procedure IIIa.

### 2.5 Part Marking

The capacitor shall be permanently and legibly marked on the case circumference with the following information, at a minimum:

- i. Manufacturer’s name and/or cage code
- ii. Manufacturer’s part number
- iii. Date/lot code
- iv. Individual unit serial number

The marking shall be resistant to solvents per MIL-STD-202, Method 215J.

### 2.6 Terminations

#### 2.6.1 Solderability

The terminations shall be solderable per ANSI J-STD-002.

#### 2.6.2 Finish

Standard leads Sn/Pb per N32 of MIL-STD-1276. For RoHS compliant leads add “-LF” at the end of the complete part number (e.g., HC2DxxxxxxHTXS-LF)

		ISSUE	01
		REVISION	A
		DATE	3/14/16

### 2.7 Resistance to Soldering Heat

The capacitor shall be able to withstand solder dipping of the terminations at 260°C for 10 seconds per MIL-STD-202, Method 210, Condition B. The capacitor shall not be visibly damaged, and the electrical characteristics shall not be affected.

### 2.8 Terminal Strength

The terminations shall be able to withstand a 5-lb, 30-second pull test per MIL-STD-202, Method 211, Condition A. The capacitor shall not be visibly damaged, and the electrical characteristics shall not be affected.

### 2.9 Fungus Resistance

The capacitor materials shall not support fungus growth, nor shall they be a nutrient to fungus.

## 3.0 ENVIRONMENTAL REQUIREMENTS

### 3.1 Operating Temperature

-55°C to +200°C (with voltage de-rating)

### 3.2 Storage Temperature

-62°C to +130°C

### 3.3 Mechanical Environmental Testing

#### 3.3.1 Random Vibration at Temperature

Capacitors of this product style have been designed and qualified to withstand 20 minutes of 75Grms random vibration, 10Hz to 10000Hz, at 200°C.

Capacitor parameters remained stable during exposure, and within specification after exposure.

#### 3.3.2 Shock at Temperature

Test results defining the shock capabilities of this product style are pending.

#### 3.3.3 Additional Mechanical Capabilities

Capacitors shall also be designed to withstand MIL-STD-202 mechanical environmental tests in accordance with Table I below.

<b>Evans</b> <b>CAPACITOR</b> Company www.evanscap.com	<b>Product Specification</b> <b>HYCAP – HIGH TEMP,</b> <b>EXTREME SHOCK</b> <b>&amp; VIBRATION</b>		NUMBER	HC – HTX
			ISSUE	01

			DATE	3/14/16

**TABLE I. Mechanical Environmental Tests**

TEST	REFERENCE	CONDITION	COMMENTS
Shock	MIL-STD-202, Method 213	D	1mS, 500g peak
Vibration, high freq	MIL-STD-202, Method 204	H	12 sweeps/axis, 80g peak
Random Vibration	MIL-STD-202, Method 214	II-K	1.5 hr/axis, 53.8g rms
Thermal Shock	MIL-STD-202, Method 107	A	30 cycles, step 3 at +125C
Moisture Resistance	MIL-STD-202, Method 106		6V bias
Altitude	MIL-STD-202, Method 105	D	100,000-ft test

*NOTE:* Environmental survivability has been demonstrated for units subjected to rigorous proprietary testing in down-hole applications. These actual environmental test conditions exceed those specified in Table I.

#### 4.0 ELECTRICAL REQUIREMENTS

##### 4.1 Capacitance

25°C, 120Hz capacitance is specified ( $\pm 20\%$ ) in Table II.

NOTE: For ordering  $\pm 10\%$  cap tolerance, add the suffix “K” to the P/N, e.g., HC2DxxxxxHTXKS.

##### 4.2 Equivalent Series Resistance

Maximum 25°C, 120Hz ESR is specified in Table II.

##### 4.3 DC Leakage

Maximum 25°C, 5-min rated voltage DCL is specified in Table II.

##### 4.4 Rated Voltage

Maximum rated voltages up to 85°C are specified in Table II. Voltage de-rating at temperatures above 85°C, up to 200°C, is specified in Table II. Between specified temperatures, voltage requires linear de-rating.

##### 4.5 Surge Voltage

Capacitors shall be able to withstand 1000 charge/discharge cycles at 110% of rated voltage at 85C through a 1K- $\Omega$  resistor. Each cycle shall consist of a 30-second surge voltage application, followed by a 330-second discharge period. Capacitors shall not be visibly damaged, and the electrical characteristics shall not be affected.

##### 4.6 Ripple Current

Capacitors are capable of dissipating up to 2.0W in free air at 85°C, allowing for a 50°C temperature rise (due to  $I^2R$ ) of the capacitor, which necessitates voltage de-rating. The specific application conditions, both electrical and physical, must be assigned such that internal capacitor heating does not exceed the maximum rated temperature; based on the ultimate temperature of the capacitors, voltage may require de-rating.

		ISSUE	01
		REVISION	A
		DATE	3/14/16

#### 4.7 Life Test

Capacitors shall be able to withstand either 175°C or 200°C life test (with appropriate voltage de-rating per Table II) for durations as follows:

FAMILY	50-75V P/N	100-125V P/N
HCD-HTX	1000 hrs	2000 hrs
HC2D-HTX	500 hrs	1000 hrs

FAMILY	60V P/N	75V P/N
HC3-HTX	500 hrs	1000 hrs

Upon completion, capacitors shall not be visibly damaged, and:

Capacitance shall be within +10%, -20% of the initial value.

ESR shall not exceed 200% of the applicable value from Table II.

**FIGURE I. MECHANICAL DIMENSIONS**

Case Size	Dimensions, mm (in)			
	Basic Case		Insulated Case	E ±6.35 (0.250)
	L +0.79 (0.031) -0.41 (0.016)	D ±0.41 (0.016)	D MAX	
D	26.97 (1.062)	9.52 (0.375)	10.31 (0.406)	57.15 (2.250)
D-LF	26.97 (1.062)	9.52 (0.375)	10.31 (0.406)	25.40 (1.000)
